

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1-21. (canceled).

22. (currently amended) A portable printer comprising:

a connecting mechanism that connects the portable printer to a portable communication terminal;

a second connector that is directly connected to a first connector of the portable communication terminal when the portable printer is connected to the portable communication terminal; and

a printer part that prints an image on a printer medium in accordance with image data input from the portable communication terminal via the first and second connectors;

wherein the connecting mechanism includes a housing for housing a part of the portable communication terminal including the first connector, and the second connector is provided at an inner side of the housing.

23. (canceled).

24. (original) The portable printer as set forth in claim 22, wherein the connecting mechanism connects the portable communication terminal to the portable printer in a lengthwise manner or a widthwise manner.

25. (original) The portable printer as set forth in claim 22, wherein the connecting mechanism externally connects the portable communication terminal onto the portable printer.

26. (original) The portable printer as set forth in claim 22, wherein the connecting mechanism includes a coupling part that is coupled with a battery attaching part of the portable communication terminal.

27. (currently amended) A portable printer comprising:
a connecting mechanism that connects the portable printer to a portable communication
terminal;
a second connector that is directly connected to a first connector of the portable
communication terminal when the portable printer is connected to the portable communication
terminal; and
a printer part that prints an image on a printer medium in accordance with image data
input from the portable communication terminal via the first and second connectors;

~~The portable printer as set forth in claim 12~~, wherein the connecting mechanism comprises a swell corresponding to a shape of a battery of the portable communication terminal,

wherein the portable communication terminal is connected to the swell of the portable printer in a space created by detaching the battery of the portable communication terminal.

28. (original) The portable printer as set forth in claim 27, wherein a power is supplied from the portable printer to the portable communication terminal when the connecting mechanism connects the portable printer to the portable communication terminal.

29. (original) The portable printer as set forth in claim 22, further comprising a battery capable of being attached and detached from the portable communication terminal so that the battery for the portable printer is an auxiliary battery for the portable communication terminal.

30. (currently amended) A portable printer, comprising:
a connecting mechanism for connecting the portable printer to a portable communication terminal;

a second connector that is connected to a first connector of the portable communication terminal via a cable; and

a printer part for printing an image on a print medium in accordance with image data input from the portable communication terminal via the first and second connectors; and

wherein the connecting mechanism comprises a swell corresponding to a shape of a battery of the portable communication terminal, wherein the portable communication terminal is connected to the swell of the portable printer in a space created by detaching the battery of the portable communication terminal.

31. (currently amended) A portable printer, comprising:

a connecting mechanism for connecting the portable printer to a portable communication terminal;

a second short distance wireless communication device capable of communicating wirelessly with a first short distance wireless communication device; and

a printer part for printing an image on a print medium in accordance with image data inputted from the portable communication terminal via the first and second short distance wireless communication devices; and

wherein the connecting mechanism comprises a swell corresponding to a shape of a battery of the portable communication terminal, wherein the portable communication terminal is connected to the swell of the portable printer in a space created by detaching the battery of the portable communication terminal.

32. (original) The portable printer as set forth in claim 22, wherein:

the print medium is an instant print film; and

the printer part includes a light emission head for exposing an image light onto the instant print film in accordance with the inputted image data, and an spread device for spreading the instant print film exposed by the light emission head to develop the instant print film.

33. (new): The portable printer as set forth in claim 22, wherein the housing comprises a recess which accommodates at least one of a width and length of a housing that contains the

portable communication terminal when the first and second connectors are connected to one another.

34. (new): The portable printer as set forth in claim 31, wherein the connecting mechanism comprises a mechanical connection for connecting the portable printer and the portable communication terminal.
